

Competition is what drives this country, and XM and Serious Radio have developed something that takes this 100 year old technology to the next level... something listeners are willing to pay for.... go ahead and try to get any listener to PAY to listen to FM or AM. It is like re-inventing toilet paper. I am very upset about the attack on Satellite Radio. I am a consumer willing to pay good money for premium radio and that is what XM and Serius offer. Localized broadcasting is what I want as a consumer. When I am paying money for premium services, then I should have a choice to listen to what I like. If I want foul language, I can tune in to the appropriate channels, if I want a local baseball game... I want it on a quality satellite signal. Leave XM alone. I am currently boycotting all traditional radio programs until this situation is resolved. I will listen to my baseball games on TV instead of the radio and Howard Stern on E! rather than FM.

I oppose HR 4026!!
